

Chargebee Product Support: Technical Assessment

NIKHIL C

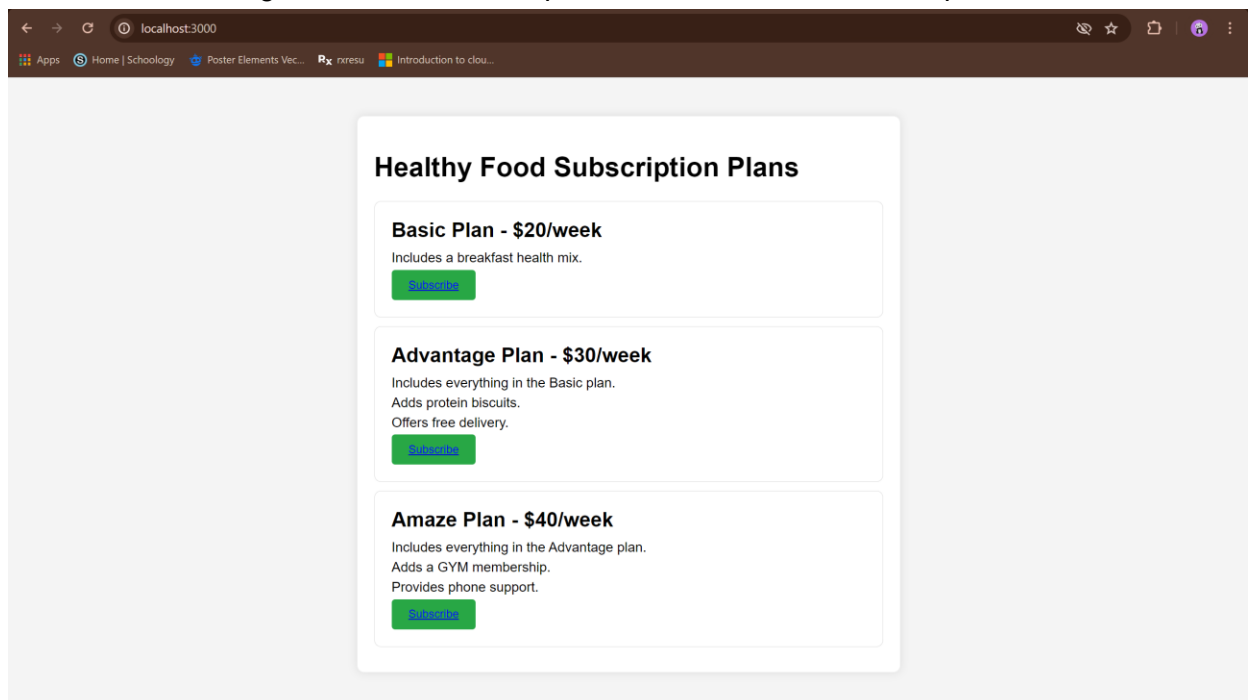

Task 1:

As a business providing healthy food and services on a weekly basis, you offer three subscription plans:

1. **Basic Plan - \$20/week**
 - Includes a breakfast health mix.
2. **Advantage Plan - \$30/week**
 - Includes everything in the Basic plan.
 - Adds protein biscuits.
 - Offers free delivery.
3. **Amaze Plan - \$40/week**
 - Includes everything in the Advantage plan.
 - Adds a GYM membership.
 - Provides phone support.

Build a basic webpage with checkout buttons for all three plans and should show a demo during the call.

- Created a webpage with checkout buttons. I have created plans on the Chargebee dashboard and integrated the header script and the checkout button script into the code

Integrate with Chargebee

Header script

Copy and paste the code on to HTML header of your website/application. You need to do this only once.

```
<script src = "https://js.chargebee.com/v2/chargebee.js" data-cb-site = "healthy-test" >
</script>
```

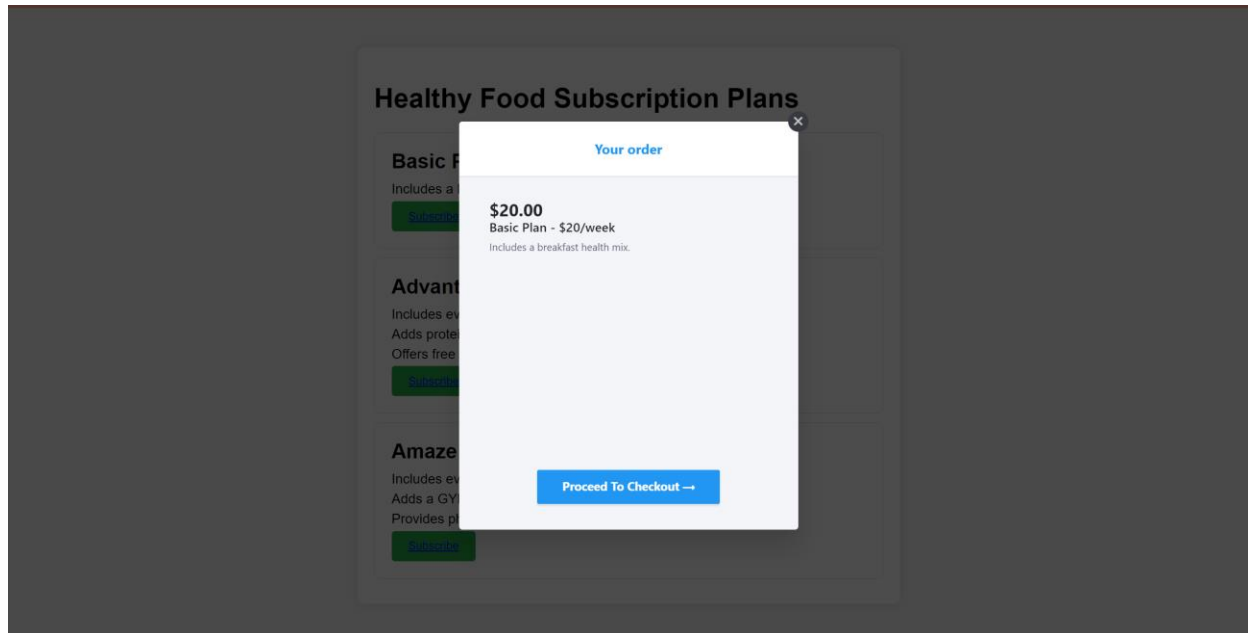

Generate Checkout Button for plan 'Basic Plan - \$20/week USD Weekly'

Select addons, and copy the code.

Choose Addons

🔍 Search Addons

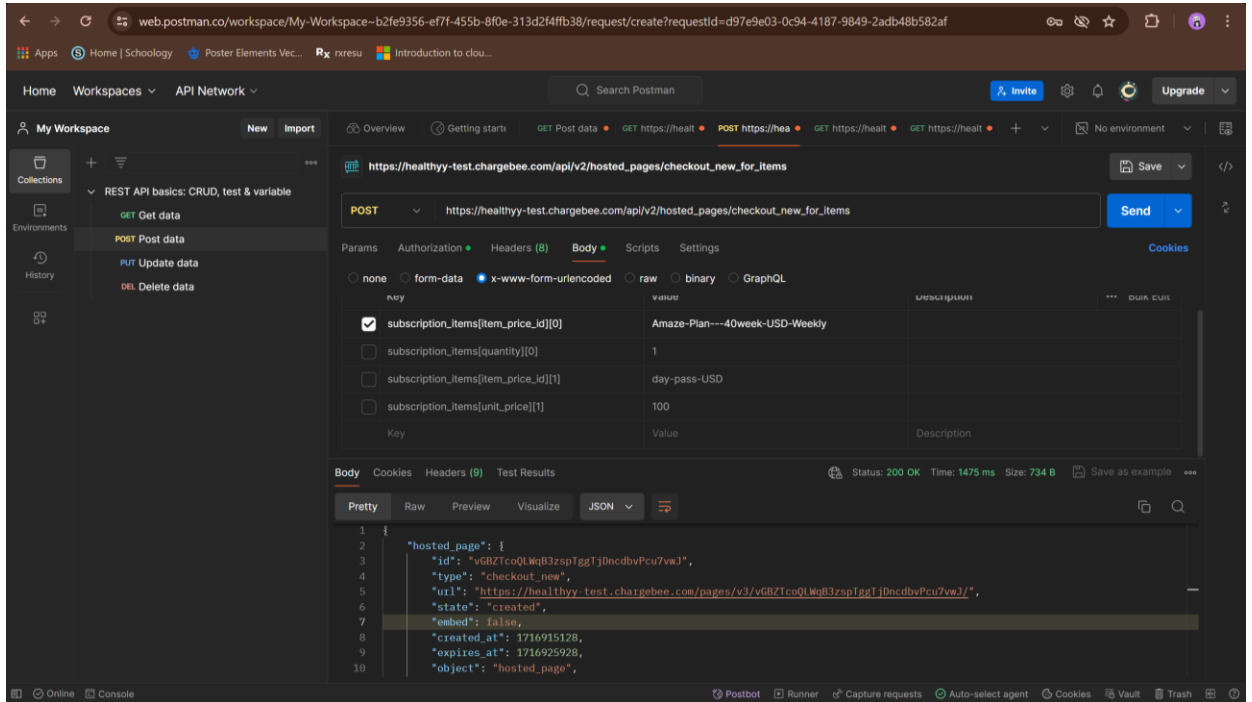

```
<a href = "javascript:void(0)" data-cb-type = "checkout" data-cb-item-0 = "Basic-Plan--20week-USD-Weekly" > subscribe </a>
```

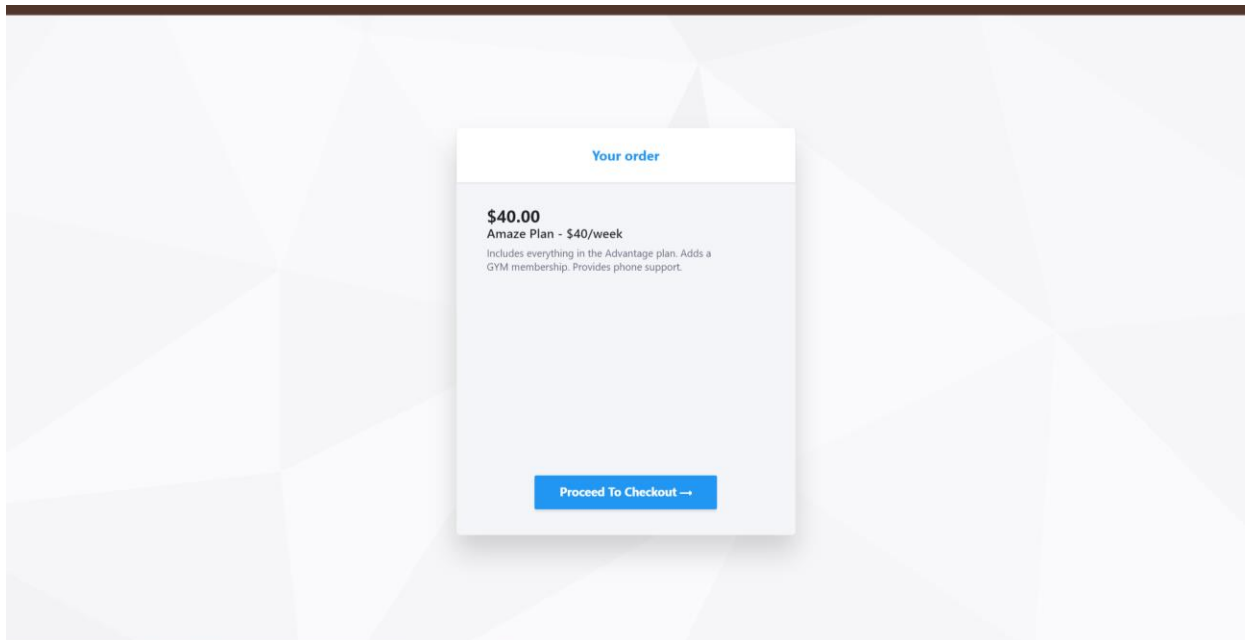

Task 2:

Utilize Chargebee APIs to generate a checkout link for the "Amaze" plan.

- As a plan for Amazon has already been created on the dashboard, I proceeded by following the Chargebee documentation. Utilizing the '[Create a Checkout for a New Subscription](#)' API, I generated a checkout link for the Amazon plan

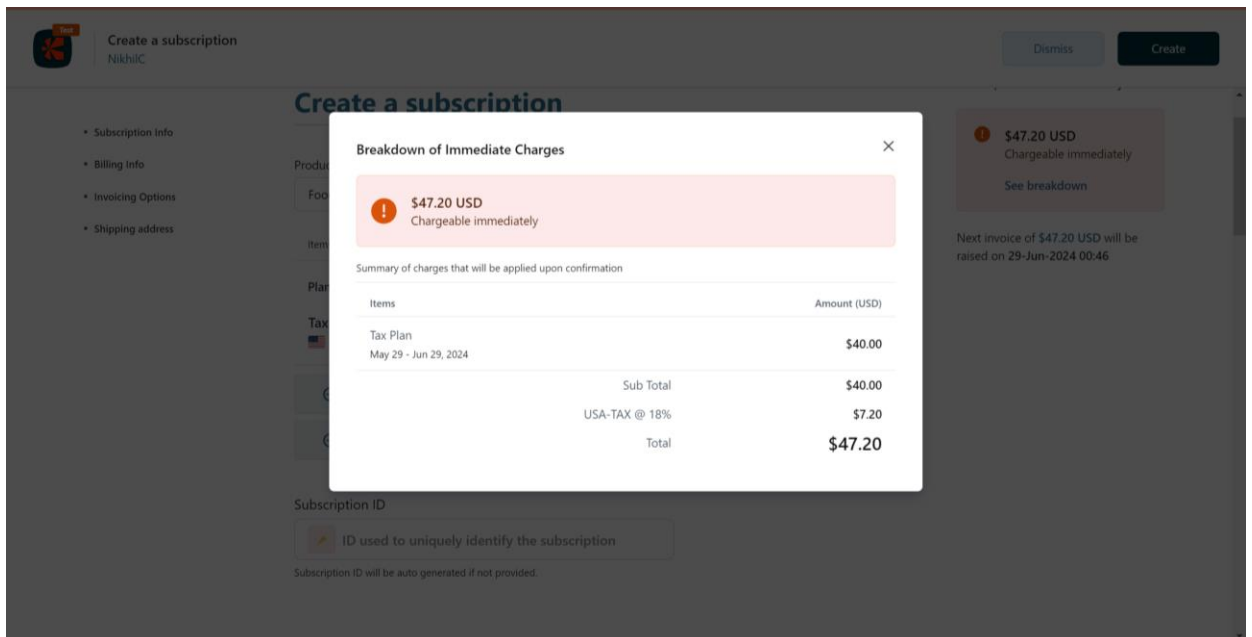

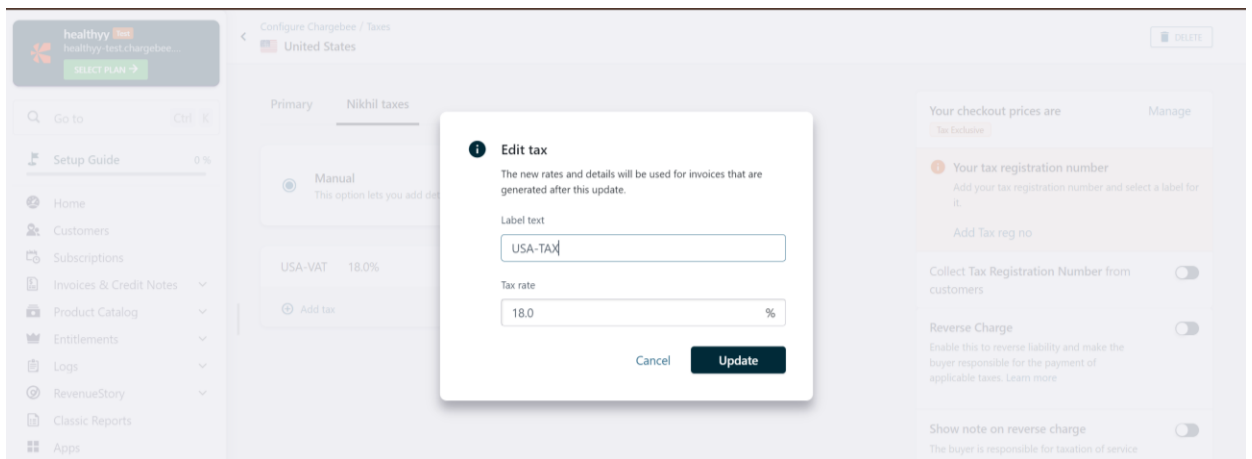

URL: [Amaze plan subscription URL](#)

Task 3:

Set up taxes at 18% GST for USA. After configuring the tax component, generate a sample invoice that includes the tax for a subscription.

- Step 1: Create a tax profile under the settings.
- Step 2: Under the same Settings, configure a tax manually with an 18% rate, as specified in the email.
- Step 3: Create a tax plan with USD as the currency, and under the tax settings, select the tax plan.
- Step 4: Create a subscription for a specific customer using the same tax plan.

Task 4:

Is it possible for a merchant utilizing Chargebee to set up an invoicing system for a customer, JFC (a renowned chicken fast-food chain), which operates in three countries (USA, Canada, and Mexico)? The requirement is to direct all invoices generated for JFC's business entities in these countries to their parent company, JFC. If this setup is feasible with Chargebee, what steps should be taken to implement it?

- **SETTING UP AN INVOICING SYSTEM FOR CUSTOMERS WITH MULTIPLE CHILD BRANCHES**

Regarding the possibility of setting up an invoicing system for a customer who has three different child branches and wants to send invoices from a parent business, this is possible with Chargebee. However, in my case, I created an account on Chargebee that came with 'Basic mode,' where I was not able to see the option to enable this feature.

After further research, I found that the account needs to be in 'Advanced mode' to enable this functionality. I concluded this by referring to [Chargebee documentation](#) and [videos](#) from the documentation. Please find the link to the relevant resources attached.
